From Simulink to AUTOSAR
Enabling Innovation with Model-Based Design
Introduction to AUTOSAR
- Simulink approach to AUTOSAR
- Overview of Modeling SWC’s & Modeling Styles

AUTOSAR Design Workflows
- Bottom Up, Top Down & Round Trip

Advanced Topics – Top 5
- Startup, Reset, and Shutdown Modeling
- Basic Software (BSW) Access
- Lookup Tables (STD_AXIS, COM_AXIS, …)
- Mode Management (ModeSenderPorts, ModeSwitchPoints, …)
- Variability inside a Software Component

Getting Started
Complexity of AUTOSAR is growing
AUTOSAR Adoption
What is AUTOSAR?

AUTOSAR® (AUTomotive Open System ARchitecture) is an open and standardized automotive software architecture.

Simulink Approach to AUTOSAR

Simulink and Embedded Coder
+ AUTOSAR Support package for Embedded Coder

Available via web download

No separate AUTOSAR Blockset needed

C Code and ARXML

Import

Export

Code-generation through Mapping
Modeling AUTOSAR Communication

- Ports in a AUTOSAR software component allow for communication

- Categories of ports based on direction
  - Require port
  - Provide port

- Each port can have either of the following Interfaces
Mapping Simulink to AUTOSAR

AR: Port

AR: Interface

AR: Data Element 1

AR: Data Element 2

AR: Data Element 3
Example Mapping to a Receiver Port

Add a New Simulink Port

Add a New Data Element to the Interface

Validate AUTOSAR to Simulink Mapping

Map Simulink Port to AUTOSAR Port
Trivia

How AUTOSAR ports are categorized?

- Depending on the acceleration
- Depending on the velocity
- Depending on the direction
- Depending on the force
- Depending on the speed

- Export SWC Description/Generate SWC C code

AUTOSAR design (Meta-model)
Using MATLAB for automating common tasks

%% Setup AUTOSAR Configuration programmatically

model = 'Average_VehicleSpeed_Calculation';

% Modify AUTOSAR Properties
autosarProps = autosar.api.getAUTOSARProperties(model);
set(autosarProps, 'Input', 'IsService', true);
set(autosarProps, 'XmlOptions', 'ArxmlFilePackaging', 'SingleFile');

% Modify Simulink Mapping to AUTOSAR
slMap = autosar.api.getSimulinkMapping(model);
mapInport(slMap, 'Input', 'Input', 'Input', 'ExplicitReceive');
mapOutport(slMap, 'Output', 'Output', 'Output', 'ExplicitSend');
AUTOSAR Schema Versions

Seamless support for AUTOSAR Releases

- Import detects AUTOSAR 2.x – 4.x release from arxml file
- User selects AUTOSAR release from configuration set options for code generation and arxml export

<table>

</table>
Verification with Software- and Processor-In-The-Loop (PIL)

- Support for SIL/PIL with AUTOSAR target
- Profile code and measure execution time on target
- Develop a custom PIL target for AUTOSAR using the toolchain build approach
MISRA C:2012 for AUTOSAR target

100% Compliance with MISRA C:2012 Mandatory and Required rules
Trivia

Identify the Non-AUTOSAR Interface?

- Client-Server Interface
- NV Interface
- Sender-Receiver Interface
- Implicit Interface
- Mode-Switch Interface
Top-Down Workflow (Starting from SWC Description)

AUTOSAR Authoring Tool

Import SWC Description

Export SWC Description

Merge SWC Description

Export SWC Description/
Generate SWC C code

Model Based Design
Top Down Workflow

AUTOSAR Authoring Tool

ARXML Files

Import as new Simulink model

Update existing Simulink model

Top Down Workflow
Starts with Authoring Tool, then user exports ARXML files from Authoring tool.

User can then either import the ARXML files into a new Simulink Skeleton model or Update an existing Simulink Model.
%Import ARXML Files
importerObj = arxml.importer('rtwdemo_autosar_multirunnables.arxml')

%Create new model with interfaces
model = importerObj.createComponentAsModel('/pkg/swc/ASWC');

Note: After running the arxml.importer command, here is the package that is needed for the second command of create Component as Model

Top Down Workflow
Commands to create a skeleton model with no internal behavior setup in the skeleton model (no runnables)
Import with Internal Behavior

Top Down Workflow
Commands to create a skeleton model with internal behavior setup in the skeleton model (create with runnables)
Updating Existing Models from ARXML

V1.arxml

Updated to V2.arxml
%cleanup
bdclose('all');
clear;

open_system('ASWC'); % Model needs to be open in order to perform update Model Command

%Import ARXML Files
importerObj = arxml.importer('rtwdemo_autosar_multirunnables_v2.arxml')

%Update existing model
importerObj.updateModel('ASWC')
Round-Trip Workflow

AUTOSAR Authoring Tool

Export SWC Description

Merge SWC Description

Export SWC Description/
Generate SWC C code

Merge SWC Description
Agenda

- **Introduction to AUTOSAR**

  - Variability inside a Software Component

- **Getting Started**
Startup, Reset, and Shutdown Modeling
AUTOSAR Startup, Reset, and Shutdown Modeling

New Simulink blocks for Initialize Function and Terminate Function

- You can map each Simulink initialize, reset, or terminate entry-point function to an AUTOSAR runnable
- All modeling styles are supported
  - Flexibility to use either Rate-Based or Export function modeling style
- Less wiring is required

rtwdemo_autosar_swc
Basic Software (BSW) Access
AUTOSAR Basic Software (BSW) block library

Simulate BSW including Diagnostic Event Manager (DEM) and NVRAM Manager (NvM)

- Out of the box solution for calls to AUTOSAR BSW services
  - Drag and drop DEM/NvM blocks for Basic Software simulation
  - Everything is preconfigured

» rtwdemo_autosar_nvm_emulation
Lookup Tables (STD_AXIS, COM_AXIS, …)
Support Round-Trip Workflows by importing Lookup Tables.

- Import arxml files that contain CURVE, MAP, lookup tables in STD_AXIS and COM_AXIS configurations.
- Importer configures Lookup Table Blocks with new classes
  - Simulink.LookupTable
  - Simulink.Breakpoint
- Supports Integrated (STD_AXIS) and Distributed (COM_AXIS) lookups
Mode Management (ModeSenderPorts, ModeSwitchPoints, …)
AUTOSAR ModeSenderPorts and ModeSwitchPoints

Modeling of AUTOSAR Mode-Switch (M-S) communication

- Ability to model application mode manager components, including AUTOSAR mode sender ports.
- Mode sender ports output a mode switch to connected mode user components.
Variability inside a Software Component
Variants in AUTOSAR component modeling

Create variants for ports and runnables

- Import Variation Points on ports and runnables into Simulink
- Model using Variant Source and Variant Sink blocks
- Validate variant conditions on blocks match designed behavior from imported arxml files
Symbols in AUTOSAR component modeling

Create symbolic dimensions for array sizes

- Modify array size in system constants between simulations, without regenerating code
- Generate C and arxml code with symbols corresponding to variant array size

AUTOSAR Support from Embedded Coder

Author and develop AUTOSAR software components for automotive systems

AUTOSAR (AUTomotive Open System ARchitecture) is an open and standardized automotive software architecture jointly developed by automobile manufacturers, suppliers, and tool developers.

Embedded Coder® Support Package for AUTOSAR Standard lets engineers model and simulate AUTOSAR software components, generate AUTOSAR production code, and verify AUTOSAR generated code using software- and processor-in-the-loop simulations. The support package also enables import and export of AUTOSAR Software Component descriptions that support top-down, bottom-up, and round-trip workflows involving third-party AUTOSAR authoring tools such as DaVinci Developer.

Platform and Release Support

See the hardware support package system requirements table for current and prior version, release, and platform availability.

View new features in the release notes.

File Information

Description: Installer file for Embedded Coder® Support Package for AUTOSAR Standard. For more details on capabilities for this support package, please visit:

www.mathworks.com/hardware-support/autosar

Opening the .mlpkginstall file from your operating system or from within MATLAB will initiate the installation process for this Hardware Support Package and acquire the latest support package available for the release you have.

This .mlpkginstall file is functional for R2014b and beyond.

**Feature highlights for new releases are shown in 'Updates' section at bottom of this page**

Required Products: Simulink Coder
Embedded Coder
Simulink
MATLAB Coder
MATLAB

MATLAB release: MATLAB 9.0 (R2016a)

Download Hardware Support Package

Download apps, toolboxes, and other File Exchange content using Add-On Explorer in MATLAB.

Course Schedule

Code Generation for AUTOSAR Software Components

This one-day course discusses AUTOSAR-compliant modeling and code generation using the Embedded Coder Support Package for AUTOSAR Standard. Workflows for top-down and bottom-up software development approaches are discussed in the context of Model-Based Design. This course is intended for automotive industry software developers and systems engineers who use Embedded Coder for automatic C/C++ code generation. Topics include:

- Generating Simulink models from existing ARXML system descriptions
- Configuring Simulink models for AUTOSAR compliant code generation
- Configuring AUTOSAR communication elements in a Simulink model
- Modeling AUTOSAR events in Simulink
- Creating calibration parameters

See detailed course outline.
MATLAB and Simulink Consulting Services

Get up and running fast. MathWorks Consulting Services - industry experience and MATLAB and Simulink expertise.

Why Choose MathWorks Consulting?
Working with MathWorks Consulting gives you the advantage of their years of project work, industry backgrounds, and deep MATLAB and Simulink knowledge.

Proven Solutions
MathWorks Consulting Services delivers reliable and effective solutions to solve your engineering challenges. Explore how MathWorks consultants work with you on a strategic level, understanding your vision.

Questions?
» Contact Consulting

Meet Our Team
Kirsty van Ryneveld is a consultant engineer who focuses on data analysis, software development, and application deployment.

"MathWorks Consultants were well-qualified, professional, and fast. They understood not only the technical issues but also the business goals, which is essential when working on a core business system. We got more than we expected from MathWorks!"
