MATLAB TOUR 2017

Novedades de las últimas versiones de MATLAB y Simulink

R2016b  R2017a

Paz Tárrega
David Pérez
Application Breadth

Workflow Depth

Platform Productivity

Products for the work you do
Machine Learning

“Learn" information directly from data without assuming a predetermined equation as a model

- Regression Learner app
  - Choose from multiple algorithms
  - Train and validate multiple models
  - Assess model performance, compare results, and choose the best model

- Code generation
  - Generate C code for predictive models that can be deployed directly to hardware devices
Deep Learning

Apply deep learning to computer vision problems

- Configure and train models using object detection algorithms (R-CNN, Fast R-CNN, Faster R-CNN)
- Leverage pretrained models for transfer learning (AlexNet, VGG-16, VGG-19)
- Import models from Caffe
- Train networks using multiple GPUs (including on Amazon EC2)

Machine Learning y Deep Learning con MATLAB
Autonomous Driving Systems

Design, simulate, and test ADAS and autonomous driving systems

- Algorithm development
  - Sensor Fusion
  - Computer Vision
  - Deep learning

- Visualization tools

- Testing and verification
  - Ground Truth Labeling App
  - Traffic scenario generation
More Modeling Domains Available

Model and simulation automotive powertrain systems
- Model gasoline, diesel, hybrid, and electric systems
- Simulate engine subsystems, transmission assemblies, battery packs

Faster Simulation
Simulink (ODE’s)

Slower Simulation
Simscape (DAE’s)
CAD Tools (PDE’s)

Design and test audio processing systems
- Low-latency signal streaming
- Interactive parameter tuning
- Automatic generation of audio plugins

Powertrain Blockset
Audio System Toolbox
Application Breadth

Workflow Depth

Platform Productivity

Products for the work you do

Support for your entire workflow
Deploy MATLAB algorithms without recoding or creating custom infrastructure

- Develop clients for MATLAB Production Server in any programming language that supports HTTP using RESTful API and JSON

- Configure and manage multiple server instances using a web-based interface
Connecting MATLAB Analytics to IoT Systems

Develop analytics and deploy IoT systems

- Quickly collect and analyze IoT data with ThingSpeak and MATLAB
- Develop analytics algorithms using MATLAB and toolboxes
- Deploy on smart devices using code generation and embedded target support
- Deploy at scale on cloud using ThingSpeak and MATLAB Production Server
New Hardware Support

Run Simulink models on low-cost hardware devices

- Run Simulink models on Raspberry Pi 3 and Google Nexus devices
- Adds to existing hardware support, including LEGO, Arduino, iPhone, and Android devices
More Connections to 3rd Party Tools

Connect your models to Onshape and DOORS Next Generation

- Convert an Onshape CAD assembly into a Simscape Multibody model
- Link and trace model elements to requirements in DOORS Next Generation
Complying with Safety-Critical Standards

Detect and fix standards compliance issues at design time with edit-time checking

- Quickly address compliance and modeling standards issues before running the model
- For example, check for prohibited blocks or block names
- Especially useful for applications that require compliance to standards such as DO-178, ISO 26262, IEC 62304
Efficient Code Generation

Improve code quality with clone detection and dynamic memory allocation

- Refactor repeating library patterns and subsystem clones
  - Reduces redundancy
  - Improves reusability

- Generate C code that uses dynamic memory allocation from MATLAB Function blocks
  - Allocate memory as needed at runtime
Floating Point HDL Code Generation

Generate HDL code directly from single-precision floating point Simulink models

- No need to manually convert from floating point to fixed point
- Mix integer, fixed-point, and floating point operations to balance numerical accuracy versus hardware resource usage
Code Verification

Detect and prove the absence of run-time errors in your source code using static analysis

- Identify CERT C violations using defect checkers and coding rules
- Detect security vulnerabilities highlighted by the CERT C standard
- Addresses growing concern over software security with the rise in system connectivity

**Application Breadth**

Products for the work you do

**Workflow Depth**

Support for your entire workflow

**Platform Productivity**

Getting your work done faster
Change the Way You Work in MATLAB

See results together with your MATLAB code in the Live Editor (introduced in R2016a)

- Add equations, images, hyperlinks, and formatted text
- Present, share, and collaborate using interactive documents
- Interactive figure updates
  - Pan, zoom, and rotate axes
  - Interactive plot customization, with MATLAB code generation to automate work
- Interactive equation editor
App Designer

Environment for building MATLAB apps (introduced in **R2016a**)

- Full set of standard user interface components, as well as gauges, knobs, switches, and lamps
- Rich design environment for laying out apps
- Object-based code format for easily sharing data between parts of the app

Enhancements include:
- Majority of 2-D plots supported
- Embed tabular displays using **uitable**
- Zoom and pan plots in apps
Working with Data Just Got Easier

New data types and functionality for more efficient storage and managing of data

- **timetable** data container *(introduced in R2016b)*
  - Store time-stamped tabular data
  - Reorganize, evenly space, and align data
- **string** arrays *(introduced in R2016b)*
  - Memory efficient, faster string operations
  - New functions for common string manipulation
- New capabilities for **preprocessing** data
  - Find, fill, and remove missing data
  - Detect and replace outliers
  - Smooth noisy data
Working with **Big Data** Just Got Easier

Use tall arrays to manipulate and analyze data that is too big to fit in memory

- Tall arrays let you use familiar MATLAB functions and syntax to work with big datasets, even if they don’t fit in memory
- Support for hundreds of functions in MATLAB and Statistics and Machine Learning Toolbox
- Works with Spark + Hadoop Clusters

Learn more at this session: *Big Data con MATLAB*
Working with **Big Data** Just Got Easier in Simulink Too

Stream large input signals from MAT-files without loading the data into memory

- Provides a big data workflow for Simulink simulations
- Use big data in Simulink logging and loading
- Especially useful when running many simulations where data retrieved is too large to fit into memory
Create Your Models Faster

Use automatic port creation and reduced bus wiring

- Add inports and outports to blocks when routing signals
- Quickly group signals as buses and automatically create bus element ports for fewer signal lines
Define your Data Faster

Reduces the need to open separate dialog boxes

- Model and block parameter data is now accessible within the main editor window
- Accessing and defining Stateflow data is also much easier
Simulate your Model Faster

Use the new `parsim` command and JIT acceleration to speed up your simulations

- Directly run multiple parallel simulations from the `parsim` command
- Quickly build the top-level model for improved performance when running simulations in Accelerator mode
- Especially use for Monte Carlo simulations and Design of Experiments
Simulink Project Upgrade

Easily update all the models in your Simulink Project to the latest release

- Avoid the manual process of upgrading one model at a time
- Simulink Project upgrade is an easy to use UI to automate the upgrade process of all the models in a Simulink project
- Fixes are automatically applied and a report gets generated
What’s New in MATLAB and Simulink?

**Application Breadth**
- Machine learning
- Deep learning
- Autonomous driving
- New modeling domains

**Workflow Depth**
- Enterprise applications
- IoT systems
- 3rd party tool integration
- Standards compliance
- Code generation and verification

**Platform Productivity**
- Live Editor
- MATLAB Apps
- New (big) data types
- Modeling enhancements
- Release adoption
