From Antenna to Bits:

Wireless System Design with MATLAB and Simulink
Innovations in the World of Wireless

- Everything is mobile
- Everything is connected to internet

Everything needs signal processing & wireless communications
Challenges in Next Generation Wireless Systems

- **Innovation drivers**
  - Ultra-high throughput
  - Massive connectivity for IoT
  - Device integration

- **Challenges**
  - Changing demands on engineering roles and skills
  - Accelerating product cycles
  - Cost of verification
Next Generation Wireless Design

Requires 7 different skills to be successful!

at least

- System Architecture
- DSP Algorithms
- Software Development
- Digital Hardware
- Mixed-Signal Hardware
- RF Design
- Antenna Design

Next Generation Wireless Design
1. Antenna to Bits Simulation
2. Smart RF Design
3. Over-the-air testing
4. LTE, LTE-Advanced & WLAN
Antenna-to-Bits Simulation

Simulate a complete wireless link

- Design modern wireless systems with components such as MIMO, OFDM, and adaptive beamforming

- Analyze signals and make measurements such as EVM, ACLR, BLER, Throughput

- Generate waveforms and create verification references for downstream implementation

- New Antenna Design capabilities using full wave EM simulation

Is this for me?
- Do you work on wireless physical layer?
- Do you simulate and measure system performance?
Example: MIMO-OFDM systems
Example: 802.11a/g/n/ac MIMO-OFDM system

- Interactive MATLAB demo
  - OFDM as the air interface technology
  - Adaptive Beam-forming (up to 8 antenna)
- Easy-to-follow end-to-end simulation
- Graphical test bench
- Tune system parameters on-the-fly
Baseband processing of 802.11x

* Build up MIMO-OFDM structure of 802.11x transceivers
* Assess performance as a function of range, angle of arrival, transmit power, interferer power
* Introduce Transmit-side beamforming, multipath fading, channel estimation and equalization

Great Demo = Full transceiver used in telemetry

Version 1: Baseline = SISO transceiver with adaptive modulation and coding

Look at MATLAB code

Version 3: Baseline + OFDM + Transmitter-side beamforming
Interactive demo
Look at MATLAB code

Version 4: Baseline + OFDM + Transmitter-side beamforming + Multipath fading
Interactive demo
Look at MATLAB code

Version 5 (optional): Multi-user version of Version 4
Interactive demo
Look at MATLAB code
MATLAB and Simulink

- **Easy** setup of MIMO-OFDM system components
- Parameter **tuning** and measurements
- (Optionally) Providing **live** data feeds of telemetry data as transmitted bit stream
1. Antenna to Bits Simulation
2. Smart RF Design
3. Over-the-air testing
4. LTE, LTE-Advanced & WLAN
Smart RF = Digitally Assisted RF Transceivers

Fast behavioral RF modeling & simulation

- Model and simulate RF transceiver together with baseband algorithms
- Develop calibration and control algorithms such as DPD or AGC to mitigate impairments and interferers
- Add measured RF component characteristics
- Use circuit envelope techniques to accelerate simulation of RF transceivers

Is this for me?
- Are you an RF system designer?
- Do you jointly model RF and digital components?
System-Level Model of SDR Tunable RF Receiver

- Model of a real off-the-shelf component
  - Analog Devices Agile Transceiver AD9361
- Based on data-sheet parameters
- Integrating digital + mixed-signal + RF + Control Logic
- Validated in the lab

What Can You Do With the System-Level Model?

- Test the RF front-end **before** going in the lab
- Test **with** your digital baseband algorithms
- **Program** the agile transceiver
1. Antenna to Bits Simulation
2. Smart RF Design
3. Over-the-air testing
4. LTE, LTE-Advanced and WLAN
Over-the-air Testing with Radio Hardware

Transmit and receive live radio signals

- Transmit and receive generated waveforms

- Configure hardware parameters from MATLAB/Simulink for a range of center frequencies and sampling rates

- Analyze acquired I/Q baseband signal with configurable measurement tools

- Verify and validate your designs based on live radio signals

Is this for me?
- Do you have a wireless lab?
- Do you need to validate your design with live signals?
MathWorks Support of Hardware

communications

USRP® Support from Communications System Toolbox
support package, Communications System Toolbox™, and a USRP® radio, you can design and verify practical SDR systems. MATLAB and Simulink Support Package for USRP® Radio includes: Use of USRP®

RTL-SDR Support from Communications System Toolbox
Capabilities and Features With Communications System Toolbox™ Support Package for RTL-SDR Radio, you can use MATLAB® and Simulink® to design and prototype systems that process real time WIRELESS...

Zynq SDR Support from Communications System Toolbox
Capabilities and Features Communications System Toolbox™ Support Package for Xilinx® Zynq®-Based Radios enables you to use MATLAB® and Simulink® to prototype and verify practical wireless systems...

FPGA Radio Support from Communications System Toolbox
The Xilinx® FPGA radio support package enables you to design and verify practical wireless communications systems. Using Communications System Toolbox™ in conjunction with a Xilinx ...

Altera Stratix V DSP Kit Support from Simulink
Altera, The Stratix® V DSP Kit is optimized for implementation of signal processing and communications designs. You can also use HDL Coder and HDL Verifier with the Stratix V DSP Kit to design...

Altera DE2 Support from Simulink
video ports. You can explore concepts in signal processing, communications, and embedded systems as you develop real-world audio and video applications using this unique FPGA workflow: Create...
Demo: Airplane Tracking Using ADS-B Signals

RTL-SDR

Mix to baseband, stream digital IQ samples

Retrieve data and process samples using MATLAB or Simulink
Tracking Airplanes Using ADS-B Signals

Double click Signal Source Selector block to select signal source.

If you select RTL-SDR radio, set the radio address in the block to the address of the radio connected to your computer.
1. Antenna to Bits Simulation
2. Smart RF Design
3. Over-the-air testing
4. LTE, LTE-Advanced & WLAN
LTE, LTE-Advanced and WLAN

Design, simulate, and test LTE, LTE-Advanced and WLAN systems

- Specify your PHY systems covering all transmission modes, channels, and signals
- Combine your LTE/WLAN baseband models with RF modeling for a combined digital-RF design

Is this for me?
- Are you working on LTE or WLAN Physical layer?

Measurements
LTE and WLAN standards in MATLAB

- **Comprehensive** set of PHY models and extensible examples
- **Open** environment, link to test and measurement instruments, RF, SDRs
- **Versatile**: detailed behavior for LTE experts, quick access to LTE waveforms for verification
Key Takeaways
Wireless Design Environment

- **Rapid and flexible** algorithm exploration, design, and analysis
- Unified simulation of digital, RF, and antenna elements

**Algorithms**
- Modulation, beamforming, synchronization

**RF Impairments**
- Nonlinearity, noise

**Antennas**
- Array elements, configuration

**Waveforms**
- LTE, WLAN, custom

**Measurements**
- EVM, BER, ACLR

**Mixed-signal**
- Discrete- and continuous-time

**Channel**
- Noise, interference
Accelerate System Development

- **HDL and C code generation** for FPGAs, processors, and ASICs
- **Multi-vendor hardware and software** support for verification and prototyping

MATLAB® and Simulink® products help engineers design and simulate communications systems with greater speed and accuracy. Using both detailed low-level models as well as higher-level behavioral abstractions, communications engineers can implement the desired level of model fidelity and run-time performance from within a single environment. MATLAB and Simulink streamline design flows by helping engineers to:

- Design and simulate communications algorithms and systems using top-down design methodologies
- Combine digital, analog/mixed-signal, and RF domains in a single system model
- Design, simulate, and verify complex systems using standards such as LTE
- Prototype designs with connections to hardware such as USRP® to enable radio-in-the-loop design
Merci pour votre participation !
