MATLAB EXPO 2019

Deep Learning and Reinforcement Learning Workflows in A.I.

Abhijit Bhattacharjee
Why MATLAB for Artificial Intelligence?
Artificial Intelligence

Development of computer systems to perform tasks that normally require human intelligence
A.I. Applications

Object Classification

Speech Recognition

Predictive Maintenance

Signal Classification

Automated Driving

Stock Market Prediction
Artificial Intelligence

- Development of computer systems to perform tasks that normally require human intelligence

Machine Learning

- Decision Trees
- K-means
- Nearest Neighbor
- Logistic Regression
- SVM
- Gaussian Mixture
- Deep Learning
- Reinforcement Learning
Unsupervised Learning
[No Labeled Data]

Clustering

Machine Learning

Machine Learning and Deep Learning
Machine Learning and Deep Learning

- Machine Learning
  - Unsupervised Learning [No Labeled Data]
    - Clustering
  - Supervised Learning [Labeled Data]
    - Classification
    - Regression
Supervised learning typically involves feature extraction.

Deep learning typically does not involve feature extraction.
Deep Learning

- Subset of machine learning with automatic feature extraction
  - Learns features and tasks directly from data
  - More Data = better model
Deep Learning Uses a Neural Network Architecture

Input Layer → Hidden Layers (n) → Output Layer
Deep Learning Datatypes

- Image
- Signal
- Numeric
- Text
Deep Learning Workflow

**Prepare Data**
- Data access and preprocessing
- Ground truth labeling

**Train Model**
- Model design, Hyperparameter tuning
- Model exchange across frameworks
- Hardware-accelerated training

**Deploy**
- Multiplatform code generation (CPU, GPU)
- Edge deployment
- Enterprise Deployment
Why MATLAB for A.I. Tasks?

- Increased productivity with interactive tools
- Generate simulation data for complex models and systems
- Ease of deployment and scaling to various platforms

Full A.I. workflows that cannot be easily replicated by other toolchains
Why MATLAB for A.I. Tasks?

Increased productivity with interactive tools

Labeling  Training  Model Exchange

Full A.I. workflows that cannot be easily replicated by other toolchains
“I love to label and preprocess my data”

~ Said no engineer, ever.
Labeling for deep learning is repetitive, tedious, and time-consuming... but necessary
Signal Labeler – annotate signals with labels/sublabels, export to workspace for training

Define Labels

View properties of labels

Interactively Label Signals
User Story – Veoneer (Autoliv)

- **Automotive**
  - Software and hardware for active safety, autonomous driving, occupant protection, and brake control
- **Building radar sensor** – check accuracy using LiDAR-based verification
- **Human analyzes hours of recorded data**
- **Used MATLAB to semi-automate labeling and tracking of 3D LiDAR point clouds.**
Manual Labeling for 25 events took over 20 minutes. After full automation with MATLAB’s tools, it took 5 minutes.
Use Deep Network Designer to Create Networks
Transfer Learning with Pre-trained Models

- Inception-v3
- ResNet-101
- VGG-16
- Inception-ResNet-v2
- ResNet-18
- GoogLeNet
- DenseNet-201
- VGG-19
- SqueezeNet
- AlexNet
- ResNet-50

Import & Export Models Between Frameworks

- Keras-Tensorflow Importer
- Caffe Model Importer
- ONNX Model Converter
Model Exchange with MATLAB

Open Neural Network Exchange

MATLAB EXPO 2019
Why MATLAB for A.I. Tasks?

- Increased productivity with interactive tools
- Generate simulation data for complex models and systems
- Ease of deployment and scaling to various platforms

Full A.I. workflows that cannot be easily replicated by other toolchains
Why MATLAB for A.I. Tasks?

Reinforcement Learning vs Machine Learning vs Deep Learning

Machine Learning

Unsupervised Learning [No Labeled Data]
- Clustering

Supervised Learning [Labeled Data]
- Classification
- Regression

Deep Learning

Supervised learning typically involves feature extraction
Deep learning typically simplifies feature extraction
Reinforcement Learning vs Machine Learning vs Deep Learning

Reinforcement learning:

- Learning through trial & error [interaction]

- It’s about learning a behavior or accomplishing a task
What is Reinforcement Learning?

- **What is Reinforcement Learning?**
  - Type of machine learning that trains an ‘agent’ through repeated interactions with an environment

- **How does it work?**
  - Through a trial & error process that uses a reward system to maximize success
Reinforcement Learning enables the use of Deep Learning for Controls and Decision Making Applications
How Does Reinforcement Learning Work?

AGENT

ENVIRONMENT

STATE  ACTION

REWARD
A Practical Example of Reinforcement Learning
Training a Self-Driving Car

- Vehicle’s computer learns how to drive… *(agent)*
- using sensor readings from LIDAR, cameras,… *(state)*
- that represent road conditions, vehicle position,… *(environment)*
- by generating steering, braking, throttle commands,… *(action)*
- to avoid collisions and lane deviation… *(reward)*.

The goal of Reinforcement learning is for the agent to find an optimal algorithm for performing a task.
Deep Networks are commonly found in the agent, because they can model complex problems.

AGENT

- Turn left
- Turn right
- Brake
- Accelerate
Reinforcement Learning Workflow

**Prepare Data**
- Data access and preprocessing
- Ground truth labeling

**Train Model**
- Reinforcement learning
  - Training agent to perform task
  - Developing reward system to optimize performance

**Deployment**
- Multiplatform code generation (CPU, GPU)
- Edge deployment
- Enterprise Deployment

Simulink – generate data for dynamic systems (planes, cars, robots, etc.)
Why MATLAB and Simulink for Reinforcement Learning?

*Virtual models allow you to simulate conditions hard to emulate in the real world.*
Using MATLAB and Simulink for Reinforcement Learning

- Reinforcement learning is a dynamic process
- Decision making problems
  - Financial trading, calibration, etc.
- Controls-based problems
  - Lane-keep assist, adaptive cruise control, robotics, etc.
Why MATLAB for A.I. Tasks?

- Increased productivity with interactive tools
- Generate simulation data for complex models and systems
- Ease of deployment and scaling to various platforms

Full A.I. workflows that cannot be easily replicated by other toolchains

Deployment and Scaling for A.I.
Embedded Devices – Automatic Code Generation

MATLAB Code → Auto-generated Code (C/C++/CUDA) → Deployment Target
Deploying Deep Learning Models for Inference

- NVIDIA TensorRT & cuDNN Libraries
- Intel MKL-DNN Library
- ARM Compute Library
GPU Coder is more than twice as fast as other compiled deep learning frameworks.

- TensorFlow XLA Compile: 120 images/second
- PyTorch JIT: 123 images/second
- GPU Coder: 287 images/second

Enterprise Deployment

Run thousands of simulations in parallel with MATLAB Parallel Server to save hours of training time.
Enterprise Deployment

Deployment to the cloud with MATLAB Compiler and MATLAB Production Server
Musashi Seimitsu Industry Co., Ltd.
Detect Abnormalities in Automotive Parts

MATLAB use in project:
- Preprocessing of captured images
- Image annotation for training
- Deep learning based analysis
  - Various transfer learning methods (Combinations of CNN models, Classifiers)
  - Estimation of defect area using Class Activation Map (CAM)
  - Abnormality/defect classification
- Deployment to NVIDIA Jetson using GPU Coder

Automated visual inspection of 1.3 million bevel gear per month
Why MATLAB for A.I. Tasks?

- Increased productivity with interactive tools
- Generate simulation data for complex models and systems
- Ease of deployment and scaling to various platforms

Full A.I. workflows that cannot be easily replicated by other toolchains
