MATLAB Live Editor

See results together with your MATLAB code in the Live Editor
(introduced in R2016a)

- Add equations, images, hyperlinks, and formatted text
- Present, share, and collaborate using interactive documents
- Interactive figure updates
- Interactive equation editor
MATLAB Online

- Provides access to MATLAB desktop and full MATLAB language support from any standard web browser

- No downloads or installs.

- Cloud Storage and synchronization via MATLAB Drive

- Log in here with your MathWorks Account: https://matlab.mathworks.com/
App Designer

Environment for building MATLAB apps
(introduced in R2016a)

- Full set of standard user interface components
- Rich design environment for laying out apps
- Object-based code format for easily sharing data between parts of the app
- Enhancements include:
  - Majority of 2-D plots supported
  - Embed tabular displays using uitable
  - Zoom and pan plots in apps
Apps Simplify Modeling and Simulation

These interactive applications automate common technical computing tasks

- Signal Analyzer app
  - Perform time- and frequency-domain analysis of multiple time series
- Regression Learner app
  - Train regression models using supervised machine learning
- Control System Designer app
  - Design single-input, single-output (SISO) controllers
Working with Data Just Got Easier

### Numeric
- double, single, ...
- logical
- categorical
- datetime
- duration
- calendarDuration

### Heterogeneous
- structure
- cell
- table
- timetable

### Text
- char
- cell string
- str
- tall

New data types and functionality for more efficient storage and managing of data:
- Numeric: double, single, logical, categorical, datetime, duration, calendarDuration
- Heterogeneous: structure, cell, table, timetable
- Text: char, cell string, str, tall
Working with **Big Data** Just Got Easier

Use tall arrays to manipulate and analyze data that is too big to fit in memory

- Tall arrays let you use familiar MATLAB functions and syntax to work with big datasets, even if they don’t fit in memory
- Support for hundreds of functions in MATLAB and Statistics and Machine Learning Toolbox
- Works with Spark + Hadoop Clusters
Working with Big Data Just Got Easier in Simulink Too

Stream large input signals from MAT-files without loading the data into memory

- Provides a big data workflow for Simulink simulations
- Use big data in Simulink logging and loading
- Especially useful when running many simulations where data retrieved is too large to fit into memory
Create Your Models Faster

Use automatic port creation and reduced bus wiring

- Add inports and outports to blocks when routing signals
- Quickly group signals as buses and automatically create bus element ports for fewer signal lines
Define your Data Faster

Reduces the need to open separate dialog boxes

- Model and block parameter data is now accessible within the main editor window
- Accessing and defining Stateflow data is also much easier
Simulate your Model Faster

Use JIT acceleration and the new **parsim** command to speed up your simulations

- Quickly build the top-level model for improved performance when running simulations in Accelerator mode

- Directly run multiple parallel simulations from the **parsim** command

- Especially use for Monte Carlo simulations and Design of Experiments

Connecting MATLAB Analytics to IoT Systems

Communication

Smart Connected Devices

Deploy algorithms to nodes/devices

Deploy analytics to server/cloud

Analytic IoT Platform

Algorithm Development

MATLAB EXPO 2017
New Hardware Support

Run Simulink models on low-cost hardware devices

- Run Simulink models on Raspberry Pi 3 and Google Nexus devices
- Adds to existing hardware support, including LEGO, Arduino, iPhone, and Android devices
More Connections to 3rd Party Tools

Connect your models to Onshape and DOORS Next Generation

- Convert an Onshape CAD assembly into a Simscape Multibody model
- Link and trace model elements to requirements in DOORS Next Generation
Efficient Code Generation

Improve code quality with clone detection and dynamic memory allocation

- Refactor repeating library patterns and subsystem clones
  - Reduces redundancy
  - Improves reusability

- Generate C code that uses dynamic memory allocation from MATLAB Function blocks
  - Allocate memory as needed at runtime
Code Verification

Detect and prove the absence of run-time errors in your source code using static analysis

- Identify CERT C violations using defect checkers and coding rules
- Detect security vulnerabilities highlighted by the CERT C standard
- Addresses growing concern over software security with the rise in system connectivity

Support for the Latest Wireless Standards

Generate IEEE 802.11ad compliant waveforms and simulate 3GPP 5G radio technologies

- IEEE 802.11ad is a new Wi-Fi standard intended for high data rate short range communication

- A new 5G library is available to explore the behavior and performance of new proposed 5G radio technologies
Machine Learning

“Learn" information directly from data without assuming a predetermined equation as a model

- Regression Learner app
  - Point and click interface
  - Train and compare multiple models
  - Select and export most accurate model

- Code generation
  - Generate C code for predictive models
Deep Learning

Apply deep learning to computer vision problems

- Configure and train models using object detection algorithms
- Leverage pretrained models for transfer learning
- Import models from Caffe
- Train networks using multiple GPUs
What’s New in MATLAB and Simulink?

Platform
Productivity
- Live Editor
- MATLAB Apps
- New (big) data types
- Modeling enhancements
- Release adoption

Workflow
Depth
- Enterprise applications
- IoT systems
- 3rd party tool integration
- Standards compliance
- Code generation and verification

Application
Breadth
- MathWorks Services
- New wireless standards
- Machine learning
- Deep learning
- Regression Learner App
Why Choose MathWorks for MATLAB and Simulink Training?

More than 50 trainings + customized
