We have heard from you…

- Several competing priorities
- Student-engagement is very important
- Course development is time consuming
Teaching with MATLAB and Simulink

- Saves course development time
- Improves student-engagement
- Equips students for life beyond campus
Controls Tutorials from Carnegie Mellon University

- Syllabus
- 2 MATLAB and Simulink tutorials
- 78 controls tutorials
- 25 lectures
- 21 problem Sets
- 2 labs
- 7 quizzes
- 5 exams

These tutorials were originally developed by Prof. Bill Messner of the Department of Mechanical Engineering at Carnegie Mellon University and Prof. Dawn Tilbury of the Department of Mechanical Engineering and Applied Mechanics at the University of Michigan. Funding was originally provided by the National Science Foundation under grant number DUE 9554819.
Interview with a real user

Prof. Neela Rayavarapu

- Head of the E&TC Department
- Symbiosis Institute of Technology, Pune
- Areas of interest
  - Control systems, Digital Signal Processing, Multirate systems
How to get started!

- Access and set up requirements
- Teach using controls tutorials
- Curriculum Integration

- Syllabus
- 2 MATLAB and Simulink tutorials
- 78 controls tutorials
- 25 lectures
- 21 problem Sets
- 2 labs
- 7 quizzes
- 5 exams

These tutorials were originally developed by Prof. Bill Messner of the Department of Mechanical Engineering at Carnegie Mellon University and Prof. Dawn Tilbury of the Department of Mechanical Engineering and Applied Mechanics at the University of Michigan. Funding was originally provided by the National Science Foundation under grant number DUE 9554819.
Access and Set Up Requirements

- Download the course material from MathWorks website

- Set up the components for your curriculum
  - Campus license - Students and faculty have access on-campus and at home!
  - Other license types – set up lab computers with necessary tools
  - 1 hour webinar by authors that shows how to use the content
Hands-on Overview - Teach Using Controls Tutorials

- Navigating course content
- Demonstrating MATLAB and Simulink examples
  - MATLAB and Simulink Tutorials (applicable to non-controls audience)
  - Introduction to system modeling MATLAB code examples
- Industry examples from the course
Controls Tutorials from Carnegie Mellon University

- Get access to the course materials
- Teach using the course materials
- Integrate in your curriculum

- Syllabus
- 2 MATLAB and Simulink tutorials
- 78 controls tutorials
- 25 lectures
- 21 problem Sets
- 2 labs
- 7 quizzes
- 5 exams

These tutorials were originally developed by Prof. Bill Messner of the Department of Mechanical Engineering at Carnegie Mellon University and Prof. Dawn Tilbury of the Department of Mechanical Engineering and Applied Mechanics at the University of Michigan. Funding was originally provided by the National Science Foundation under grant number DUE 9554819.
Building a course

- What are the most common challenges you face while building a course?
- What are the most common challenges a student faces while learning a course?
- What is the most desired outcome of a course for you and the student?
Taking a step back

- Translating concepts from paper into practice involves more than just learning the concepts

- What are some ways you help enable this transition?
Why is Computational Literacy Important?

"Computational thinking is a fundamental skill for everyone, not just for computer scientists."

"Coding teaches me to think in a logical way"

Dr. Jeannette Wing, Vice President of Microsoft Research
Former Department Head of CS at Carnegie Mellon University

Trinity School high school student
Accepted at MIT

MATLAB EXPO 2017
How is Computational Thinking Learned?

Computational Thinking

Do students just “pick up” computational thinking?

Math Skills

Isn’t math taught systematically and reinforced throughout the curriculum?
How Math is introduced in the curriculum

How is Computational Thinking introduced?
How Math is introduced in the curriculum

Should Computational Thinking be built up like we introduce Math?

MATLAB EXPO 2017
Course Implementation Plan

Components of a course

- Background reading (pre-requisites)
- Theoretical Concepts
- Lab components
- Homework Assignments/Quizzes
- Exam component

What components can benefit from the use of a computational tool?
## Course Implementation Plan

<table>
<thead>
<tr>
<th>Course Component</th>
<th>Resources and Tools</th>
</tr>
</thead>
<tbody>
<tr>
<td>Background reading (pre-requisites)</td>
<td>• MATLAB Academy – Tool knowledge</td>
</tr>
<tr>
<td></td>
<td>• Examples and apps illustrating concepts</td>
</tr>
<tr>
<td>Theoretical Concepts</td>
<td>• Examples and apps to illustrate concepts to facilitate better understanding</td>
</tr>
<tr>
<td></td>
<td><em>(not a replacement for teaching concepts)</em></td>
</tr>
<tr>
<td>Lab Components</td>
<td>• Examples, apps, hardware connectivity based exercises</td>
</tr>
<tr>
<td>Homework Assignments and Quizzes</td>
<td>• Cody Coursework</td>
</tr>
<tr>
<td>Exam and Design Projects</td>
<td>• Cody Coursework for exams</td>
</tr>
<tr>
<td></td>
<td>• MATLAB for project design and implementation</td>
</tr>
<tr>
<td></td>
<td>• Interactive Live Editor &amp; Publish Functionality for project reports</td>
</tr>
</tbody>
</table>
Thank You!
