Notes for the Microsoft Windows Tables for all MATLAB 7.2 (Release 2006a) and Simulink 6.4 (Release 2006a) Related Products

1. The list that is generated when using the `mex -setup` and `mbuild -setup` commands refers to the Microsoft Visual C/C++ .NET 2003 Compiler as Microsoft Visual C/C++ 7.1, and refers to the Microsoft Visual C/C++ 2005 Compiler as Microsoft Visual C/C++ 8.0. Only the Professional Edition of the Microsoft Compiler (version 6.0, 7.1 or 8.0) is officially tested and supported by the MathWorks products.
2. In order to build .NET components, the Microsoft .NET Framework SDK 1.1 must be installed. This product can be downloaded from the Microsoft website: <http://msdn.microsoft.com>
3. Version 6 of the Borland C++ Builder is packaged with Borland C/C++ Compiler 5.6. Version 5 of the Borland C++ Builder is packaged with Borland C/C++ Compiler 5.5.
4. Fortran compilers are only supported for creating Simulink S-functions using the MATLAB MEX command. The S-functions can be used with normal and accelerated simulations.
5. To use Microsoft Visual Studio 2005 on with MATLAB on 64-bit systems, the “X64 Compilers and Tools” must be chosen for installation during installation of Microsoft Visual Studio 2005.

Exception Handling

When using C++, the MATLAB Compiler relies on the availability of exception handling in the C++ language. Several of the supported compilers do not properly support C++ exception handling. Consequently, our support for exception handling is limited on those platforms.
