

Supported and Compatible Compilers – Release 2016a

A number of MathWorks products or product features require that you have a third-party compiler installed on your system. The tables below outline the compilers that are supported by various MathWorks products. These compilers are provided by a number of vendors and are available under a variety of commercial, academic, or open source terms; visit the providers' Web sites for further information.

Windows (64-bit)

Note:

- Microsoft Visual C++ 2008 is not supported as of R2016a
- Intel C++ Composer XE 2011 is not supported as of R2016a
- Intel Visual Fortran Composer XE 2011 is not supported as of R2016a
- Support for Intel Parallel Studio XE 2016 was added in R2016a
- Support for Intel Parallel Studio XE 2015 was added in R2016a
- Microsoft Visual C++ 2010 Professional SP1 support will be dropped in a future release
- Microsoft Windows SDK 7.1 support will be dropped in a future release

Notes for the Windows (64-bit) Platform

- Support for some versions of this compiler will be discontinued in a future release, at which time a new version will be supported. Consult the platform road map for more information.
- Microsoft Windows SDK 7.1 may not be compatible with Windows 8 or Windows 10
- Intel compilers depend on tools provided by Microsoft. The following combinations are supported:

4. To build .NET components, a Microsoft .NET Framework must be installed. The .NET Framework v3.0 does not contain a framework-specific compiler; compatible components can be built using the v2.0 compiler. The .NET Framework is automatically installed by Visual Studio. It can also be downloaded from the Microsoft Web site. To execute applications that use the resulting .NET components, the target machine must have the matching .NET Framework installed.
5. MATLAB Compiler SDK supports building .NET assemblies but not COM objects when using the Microsoft .NET Framework SDK without Microsoft Visual Studio.
6. This compiler does not support OpenMP. Code generation will treat parfor-loops as for-loops.
7. .sln project generation is not supported when using the Microsoft Windows SDK.
8. Fortran compilers are supported with Simulink only for creating Simulink S-Functions using the MATLAB MEX command. The S-Functions can be used with normal and accelerated simulations.
9. Simulink Real-Time supports Fortran code in Simulink models using C-MEX wrapper S-Functions.
10. When building Excel add-ins for MPS, MATLAB Compiler SDK requires .NET framework 4.0 or later.

Mac OS X

Note:

- Xcode 5.x is not supported as of R2016a
- Xcode 7.x is supported as of R2016a
- Xcode 6.x support will be dropped in a future release

On the Mac, no C compiler is supplied with MATLAB. If you use products that require one, Apple's development environment for OS X (Xcode) is available in the Mac App Store.

To determine the version of Xcode installed, start Xcode and then select Xcode->About Xcode.

Notes for the Mac Platform

1. This compiler does not support OpenMP. Code generation will treat parfor-loops as for-loops.
2. Fortran compilers are supported with Simulink only for creating Simulink S-functions using the MATLAB MEX command. The S-functions can be used with normal and accelerated simulations.

Linux (64-bit)

Note:

- GCC C/C++ 4.7.x support will be replaced with a newer version in a future release
- GNU gfortran 4.7.x support will be replaced with a newer version in a future release

On Linux, no C compiler is supplied with MATLAB. The GNU compiler (GCC) is included with many Linux distributions.
